-  4 EXTERNAL ALARM INPUTS

CONTACT STAFF WITH EASE

Imagine being able to lessen the chaos of a retail environment at the touch of a button. CommtechWireless has the solution with its easy to use, wireless messaging and push button applications. Silently communicate with managers, customer service, stock personnel and security anywhere in the store with our silent paging solutions.

FRONT END CHECKOUT

At the chaotic front-end of any retail environment, quick and inconspicuous communication of front-end needs is essential - and HandyPage is lightning fast and silent. Notification of cash requirements, voids, check approvals, security issues and customer assistance can all be made without any fuss using the push-button HandyPage at the register. When data is entered, the system noiselessly and almost immediately generates a text message on the manager's pager.

REMOTE CONTROL

When HandyPage is coupled with RELAYPage, you can quickly create a remote control system that enables selected buttons to control various devices. This ultimately gives you control over devices such as lights, access control, alarms, reticulation, doors and any other device that operates electrically - allowing a circuit to be triggered on or off by RELAYPage.

PC PROGRAMMABLE

All settings for HandyPage can be programmed via any PC using the supplied software. You can easily define recipients, as well set the pre-defined messages each recipient will receive.

CUSTOMER SERVICE

Maximize your customer's buying potential by offering customer paging at your pharmacy, photo processing, florist, hairdresser or any other business where customers must wait for store services. The HandyPage system allows them to freely walk around your store and purchase additional items.

Personal and commercial security, medical alert, restaurants, supermarkets and remote machinery control are just a few of the potential applications for this family of transmitters. Where the transmitter is fitted with multiple buttons, each button can be programmed with unique user-defined messages for paging applications, or control character sequences for remote control applications.
