

PRODUCT **RESPAGE**

-  **MULTI-USER / LAN PAGING**
-  **SCHEDULED MESSAGES**
-  **REMINDER MESSAGES**
-  **PRIORITY PAGING**
-  **SIMPLE USER INTERFACE**
-  **STAFF SCHEDULE SYSTEM**

**RESPAGE**

RESPage is a multi-user Microsoft Windows® application that enables you to send messages directly to on-site pagers via a local transmitter.

**REPORTING**

The reporting facilities in RESPage provide management with many suitable statistics which are viewed on screen as full colour graphs. Your management are able to review response times to alarms, track when a message was sent and who it was sent to, monitor which departments are busy and, with on screen graphical analysis, review peak periods within the premises. In the event of a serious situation, you're able to review what happened during a particular time period.

**GROUP MANAGEMENT**

Simultaneous notification of more than one person is a need many companies share. For example, in a fire alarm situation it is imperative that several people are informed at the same time. RESPage's Group Management function lets you create groups to be notified with no more than a click and drag of your mouse.

**STAFF SCHEDULING SYSTEM**

The scheduling facility enables different staff members to be contacted depending on what time of the day and which day of the week a call is placed to them. The scheduling system is identical to traditional manual scheduling. Schedules are highlighted in various colors so you can quickly see who is scheduled for a particular shift. Simply click on the schedule and RESPage pages the correct person.

**REMINDER MESSAGES**

As well as the traditional 'manual paging' facilities RESPage includes a comprehensive reminder message system. Users can schedule messages to be sent at any date and time, and then specify repeat messages to be sent periodically for as long as desired.
